

Discussion Paper #5: Implementing the Active Transportation Network

City of Temiskaming Shores
Draft November 2021

### **Table of Contents**

1	IMPLEMENTING THE NETWORK	
2	PHASING	3
2.1	Key Takeaways for Phasing	9
2.2	Priorities in the network	10
3	COSTING ESTIMATES	13
3.1	Sidewalk Funding	14
4	PARTNERSHIPS	15
5	FUNDING OPTIONS	17
6	SUPPORTING IMPLEMENTATION	19
6.1	Policy Considerations	19
7	OPERATIONS AND MAINTENANCE	21
7.1	Winter Maintenance	23
8	MONITORING AND REPORTING	24
8.1	Monitoring of active transportation assets	24
8.2	Undertake Survey of Residents	24
8.3	Provision of Permanent Data Collection Tool	24
8.4	Report on Implementation and Progress	25
9	NEXT STEPS AND RECOMMENDATIONS	26

### 1 IMPLEMENTING THE NETWORK

The Active Transportation Plan is intended to serve as a flexible guideline for City Staff to create a culture of active and sustainable travel within Temiskaming Shores through the expansion of new routes, enhancement of existing routes and development other supportive infrastructure and programs. In order to achieve the vision of a safe and accessible network for people of all ages and abilities, financial investment and supportive resources will be needed to begin implementation in the short term.

The recommendations and information contained within this plan are intended to inform day-to-day decisions that not only propel the City forwards in the short-term, but also build momentum and encourage long-term efforts.

Implementation of the plan will require on-going collaboration between the City and its partners to ensure that the recommendations outlined within this document are publicly supported and realistic for Temiskaming Shores. Meaningful partnerships between different stakeholders and organizations will be required to achieve the desired outcomes. Collaborative efforts include the planning and implementing physical infrastructure, educating users on how to properly use the facilities, and promoting the City's existing assets to fully realize the economic potential of active transportation in Temiskaming Shores.

The following chapter provides the City with an achievable implementation strategy that will inform future decision making, policy and planning processes. Information is provided on a suggested phasing strategy, cost estimates, partnerships, funding options and additional considerations to help guide next steps.

### 2 PHASING

Developing an appropriate phasing strategy is a critical component of an active transportation master plan to make progress towards the City's overall vision. The Temiskaming Shores proposed phasing is categorized into two phases: 0 to 5 years and beyond 5 years. The proposed phasing for the City's active transportation network was prioritized based on several factors that reflect the current processes and plans, as well as input from the City Staff, technical and interested stakeholders and residents. Each of the routes and crossing enhancements in the active transportation network are identified under a phase based on the following considerations:

#### Short Term: 0 to 5 years

- Low investment projects (most signed bike routes) to achieve quick wins.
- Coordination with projects identified in the City's current Capital Budget.
- Major routes that form the spine of the network.
- Crossing enhancements that require repainting.
- Future studies to assess the feasibility and design of active transportation routes.

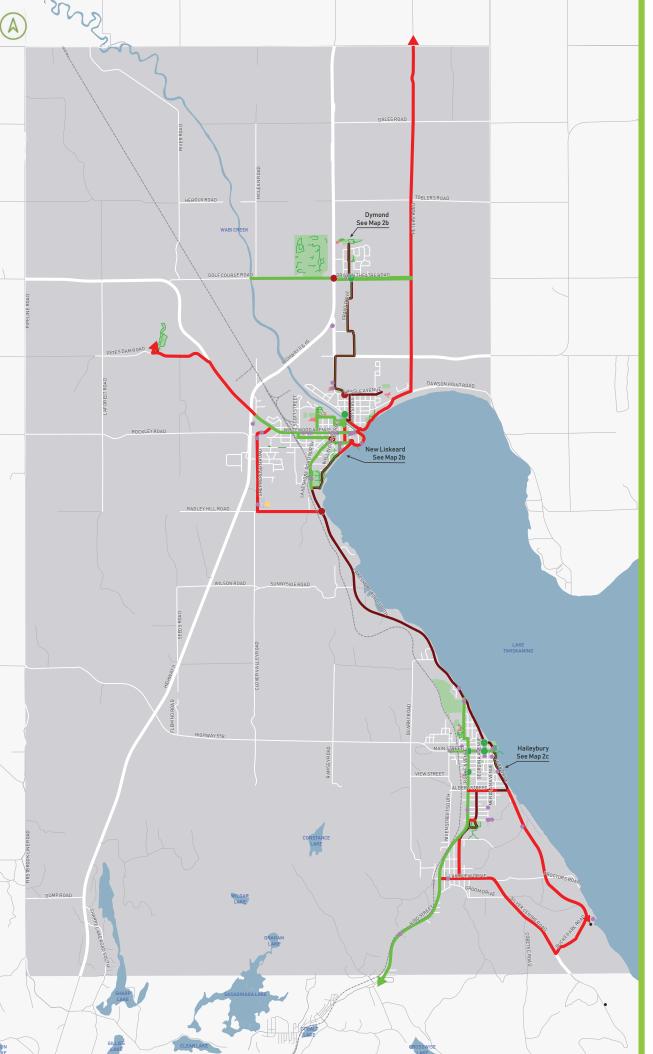

#### Long Term: 5+ Years

- Projects that will require major investment in rural areas.
- High profile routes and crossing enhancements that will require future studies to confirm feasibility / design.
- Corridors that have been recently reconstructed and not scheduled for upgrades in the short term.
- Sidewalk connections across the City.
- Projects that require additional discussions with the Ministry of Transportation before they can proceed.

The proposed phasing is illustrated in Maps 1a, 1b and 1c and also summarized below in Table 1.

**Table 1 - Phasing Overview for the Active Transportation Network** 

Facility Type	Short Term 0 – 5 years	Long Term 5+ years	Total KM
Off-Road Multi-Use Trail	0.1	5.5	5.5
In-Boulevard Multi-Use Path	0.0	1.6	1.6
Buffered Bike Lane	3.3	0.4	3.7
Buffered Bike Lane or two-way on-road	1.4	0.0	1.4
Bike Lane	0.4	0.0	0.4
<b>Buffered Paved Shoulders</b>	3.9	2.7	6.6
Paved Shoulder	2.0	10.3	12.3
Sharrows Markings	1.1	0.0	1.1
Signed Route	3.1	4.8	8.0
<b>Candidate Locations for Pilot Projects</b>	0.2	0.0	0.2
Candidate Locations for Traffic Calming Measures	3.6	0.0	3.6
Pedestrian Bridge	0.0	0.1	0.1
Sidewalks	0.0	14.4	14.4
Total	19.1	39.8	58.9

In addition to the proposed phasing of the linear active transportation routes, there are 10 proposed crossing enhancements. Where possible, the proposed implementation of these enhancements is intended to be consistent with planned projects identified in the Town's capital plan and the proposed phasing of the ATP routes to capture input received from Town staff, stakeholders and the public. **Table 2** provides and overview of the suggested implementation horizons for each location where a crossing enhancement is proposed.

**Table 2 - Summary of Proposed Crossing Enhancements** 

	Location		Proposed Enhancement	Proposed Phase
1		Ferguson Avenue / Main Street	Add stop signs and pavement markings	Short
2		Rorke Avenue / Main Street	Closing channelized intersection and normalizing it as a standard 4 legged stop controlled intersection	Short
3		Cecil Street / Rorke Avenue	Move school crossing for École Saint Croix School to the Cecil Street / Rorke Avenue intersection to align with existing sidewalks on Cecil. Alternatively, enhance the crossing at View and Rorke to a Pedestrian Crossover	Short
4		Browning Street / Ferguson Avenue	Add stop signs and pavement markings, install curb extensions / bump outs	Short

	Location		Proposed Enhancement	Proposed Phase
5		STATO Trail / Hessle Avenue	Monitor current configuration of the raised crosswalk at the school and recommend a future detail design study in this intersection to improve safety and reduce conflicts	Long
6		Armstrong Street / Elm Avenue	Add bollards to provide a designated space for cyclists approaching the intersection per the direction in the Wabi River Bridge Design Appendix.	Short
7		Lakeshore Road North / Farah Avenue	Monitor for future traffic control (consider relocating stop lights from Broadwood to Farah)	Long
8		Highway 11 / Drive In Theatre Road	Recommend for active transportation consideration in future reconstruction of the road for improved safety for all users – likely a signalized crossing in partnership with MTO.	Long
9		Drive In Theatre / Grant Drive	Add stop signs and pavement markings	Short

	Location		Proposed Enhancement	Proposed Phase
10		Radley Hill Road / STATO Trail	Signalized, potential to add cycling facility with improvements	Long

As the City moves forward with implementing the proposed active transportation network, it is recommended that staff review and confirm the proposed facility or enhancement at each location. The phasing plan should be updated annually to reflect available budgets, newly planned capital projects or changes in existing conditions, such as volume or pavement conditions.

#### 2.1 KEY TAKEAWAYS FOR PHASING

Short Term Projects (0-5 years)

- Approximately 32% of the network is proposed in the short term. These investments represent some
  of the most significant connections to close gaps in the existing transportation network in
  Temiskaming Shores, and will provide a high quality network of active transportation facilities
  connecting most of the City's major destinations within its population centres.
- Short term projects account for 7% of the total estimated cost for the proposed network. This is largely due to the phasing of most signed bike routes and sharrows within the first five years as they are considered low investment and quick wins. These investments help to establish network connectivity on streets with lower speeds and volumes. In addition, sidewalk improvements are not included in the Short-Term phasing horizon. Sidewalks represent the single largest source of investment for the City of Temiskaming Shores emerging from this plan, largely owing to a historical backlog of sidewalk construction within the City.
- Other short-term projects include candidate locations for pilot projects and traffic calming measures
  for locations that require additional monitoring or studies and have been noted by City Staff, key
  stakeholders and residents as challenging locations. The Wabi River crossing on Armstrong Street is
  a notable example where a proposed two-stage left turn box is recommended as a pilot project.
- Appendix A includes a detailed breakdown of all routes that form part of the active transportation network for Temiskaming Shores.
- Municipal planning documents are typically updated every five to ten years, consistent with the Municipal Planning Act. As such, the ATP focus for implementation are short term projects (within the first five years). Longer term projects should be reviewed in 2027 to determine their relevance and feasibility through an ATP update process.

#### Long Term Projects (5+ years)

- The long-term projects for the ATP represent 93% of the estimated costs of the network and 68% of the total length of new facilities. Sidewalks account for a significant portion of this budget.
- Sidewalk improvements, additions and replacements should be captured in annual budgeting
  processes beginning as early as possible. Priority gaps in the sidewalk network should be closed
  each year.
- Routes identified in the long-term horizon should be reviewed when the plan is next updated, and at that time, staff should determine the appropriate phasing for routes based on available budgets, resources and opportunities.

#### 2.2 PRIORITIES IN THE NETWORK

For the purposes of the Temiskaming Shores ATP, the Short-Term Active Transportation Network represents the key priorities for implementation. Developed to:

- Take advantage of planned capital works, such as the resurfacing of Rorke Ave / King Street in 2022
- Provide a complete and connected network of cycling facilities within the urban areas of Temiskaming Shores by the end of 2027 and;
- Connect the existing STATO Trail to key destinations like commercial areas, schools, transit services and employment areas;

The Short-Term Network prioritizes low-cost, high impact elements of the Active Transportation Network to help to build a stronger culture of active transportation within Temiskaming Shores. A summary of these priorities is included below in **Table 3**.

**Table 3 - Summary of Priority Projects** 

Corridor	Proposed Facility Type and notes
Golf Course Road / Drive in Theatre Road	Traffic calming measures on Golf Course Road to reduce vehicle speeds, multipurpose paved shoulders of Drive In Theatre Road
Connection to St. Michel School at north end of Laurette Drive	Improved trail (asphalt, 3m wide)
Armstrong Street Bridge (Sharpe to Elm)	Bidirectional separated bike lanes on east side of the bridge
Niven Street North	Signed route
Dymond Avenue	Sharrows and traffic calming
Church Street	Sharrows and traffic calming

Corridor	Proposed Facility Type and notes
Sharpe Street from Armstrong Street to Wellington Street N	Sharrows and traffic calming
Paget Street N from Dymond Avenue to Spruce Avenue	Sharrows and traffic calming
Spruce Avenue from Paget Street N to Wellington Street N	Sharrows and traffic calming
Whitewood Avenue from Bedard Drive to Riverside Drive	Buffered / parking protected bike lanes
Rokeby Street from Whitewood Avenue to Farah Avenue	Signed route
Farah Avenue from Rokeby Street to Paget Street S	Signed Route
Cedar Avenue from Paget Street S to May Street S	Signed route
Wellington Street S from Cedar Avenue to Waterfront Boardwalk Trail	Signed route
Lakeshore Road N from Beach Boulevard to Whitewood Avenue	Buffered bike lanes or bidirectional separated facility on east side of the road
King Street / Rorke Street / Rorke Avenue corridor from southern City limits to Probyn Street	Convert entire corridor to single lane conditions with turning lanes where necessary – reallocate additional space for paved shoulders.  Buffered paved shoulders where width permits, paved shoulders where right of way is more constrained and buffered bike lanes from Morissette Drive to Main – signed route north of Main.
Probyn Street from Rorke Avenue to Latchford Street	Signed Route
Latchford Street from Probyn Street to Lakeshore Road	Signed route

Corridor	Proposed Facility Type and notes
Main Street from Niven Street South to the Waterfront	Bike lanes from Niven to Rorke, Buffered / parking protected bike lanes from Main to Ferguson, traffic calming and signed route from Ferguson to waterfront
Ferguson Avenue from Amwell Street to Browning Street	Signed route with traffic calming measures

### **3 COSTING ESTIMATES**

Implementing the proposed active transportation network will require funds and resources from the City and its partners. Annual funding for construction, maintenance, operation and programming should be identified in the annual budgeting process to strategically implement the active transportation network over time. The City should seek additional funding sources, such as from the Provincial or Federal government, to maximize budget efficiencies and coordination with other major projects.

High-level costing has been prepared for the proposed active transportation network. This costing is based on a set of unit prices (included as **Appendix A**) that are average rates that reflect best practices from comparable municipalities. It is recognized that the level of effort will vary on a project-by-project basis and that the price of materials will vary over time. Certain projects could require additional work and further studies as they are considered for implementation. As part of the ATP, a 15% contingency and 10% design and approvals cost have been assumed for budgeting purposes.

**Table 4** presents the estimated cost to implement the active transportation network, organized by facility type and by phase. For the focus of short-term priorities, the estimated cost to implement is approximately \$1.2 million over the next five years.

**Table 4 - Summary of Estimated Costs by Facility Type** 

	Sho	ort-Term	Lor	ng-Term	Total		
Facility Type	Length (KM)	Estimated Cost	Length (KM)	Estimated Cost	Length (KM)	Estimated Cost	
Off-Road Multi-Use Trail	0.1	\$23,595	5.5	\$2,505,503	5.6	\$2,529,098	
In-Boulevard Multi-Use Path	0.0	\$ -	1.6	\$739,214	1.6	\$739,214	
Buffered Bike Lane	3.3	\$149,292	0.4	\$32,794	3.7	\$182,086	
Buffered Bike Lane or Two- Way On-Road	1.4	\$110,038	0.0	\$ -	1.4	\$110,038	
Bike Lane	0.4	\$14,574	0.0	\$ -	0.4	\$14,574	
Buffered Paved Shoulders	3.9	\$227,912	2.7	\$995,516	6.6	\$1,223,428	
Paved Shoulder	2.0	\$416,305	10.3	\$2,764,183	12.3	\$3,180,488	
Sharrows Markings	1.1	\$15,813	0.0	\$ -	1.1	\$15,813	
Signed Route	ned Route 3.1 \$4,711		4.8	\$7,222	7.9	\$11,933	
Candidate Locations for Pilot Projects	0.2	\$45,016	0.0	\$ -	0.2	\$45,016	
Candidate Locations for Traffic Calming Measures	3.6	\$51,796	0.0	\$ -	3.6	\$51,796	
Pedestrian Bridge	0.0	\$ -	0.1	\$1,950,000	0.1	\$1,950,000	
Sidewalks	0.0	\$ -	14.4	\$5,389,125	14.4	\$5,389,125	
Crossing Enhancement	-	\$123,000	-	\$230,000	-	\$353,000	
Total	19.1	\$1,182,052	39.8	\$14,613,557	58.9	\$15,795,609	

Detailed costing information is contained in **Appendix A**. It is recommended that this appendix be used as a tool by City Staff to track the progress of implementation of the network and to inform future budgeting and decision making. The intent of these estimated costs are to guide decision making, such as capital planning. The phasing and costing are not intended to be prescriptive. As part of annual budgeting processes and to supplement active transportation infrastructure in Temiskaming Shores, it is recommended that the City also consider allocating funding to support the delivery of outreach initiatives proposed in the programming chapter of the ATP.

#### 3.1 SIDEWALK FUNDING

As identified above, the construction of new sidewalks to complete Temiskaming Shores' network of pedestrian facilities is the single largest expense identified within the ATP. The gaps in the City's sidewalk network reduce accessibility and constrain the mobility of some of the City's most vulnerable road users, including children, seniors and people with disabilities. It is imperative that the City take steps to provide a comprehensive network of well-maintained sidewalks throughout the community to make walking and wheeling easier, safer and more convenient. It is recommended that the City create an annual capital budget allocation to complete the sidewalk network over time. The City's sidewalk deficit is the result of many years of capital budget prioritization and is not likely to be solved in the short term. By allocating a consistent budget to sidewalk improvements each year, the City will incrementally improve its connectivity, slowly resulting in a network that connects all residents to their destinations.

### **4 PARTNERSHIPS**

Implementation of the ATP will require various partnerships from several groups. Successful implementation will rely on City staff working with other levels of government and stakeholders to build, maintain and market active transportation assets to achieve the Plan's vision.

The City has a number of partners that it can rely on to support implementing the plan. With a strong active transportation community and many engaged stakeholders, the City is well positioned to use this plan to create new partnerships to build a stronger culture of active transportation. As the City's culture of active transportation grows, the City and its partners should focus efforts on marketing the City as an active transportation hub within Northern Ontario. The unique balance between access to natural landscapes and access to urban amenities is a significant competitive advantage for Temiskaming Shores, and highlighting the City's investments in active transportation can highlight its focus on providing a high quality of life to residents, and a great visitor experience to tourists. By leveraging these unique assets, the City is well positioned to be an active tourism leader in Ontario.

The City is also uniquely positioned in that Temiskaming Transit provides a well-utilized transportation service that can serve as the foundation for a more multi-modal future for the City. Temiskaming Transit has the opportunity to enhance the overall active transportation network by providing bicycle parking and benches at bus stop locations, serving the needs of pedestrians and cyclists and creating more multi-modal travel. By expanding access and enhancing comfort for users who walk or bike to connect to transit, the service also expands its own potential customer base, helping to shift the transportation paradigm within Temiskaming Shores. These partnerships would not only help to implement the ATP, but also support first-mile, last-mile travel.

A comprehensive table of proposed partners and their anticipated role is presented in **Table 5**. This list is not exhaustive and there could be new partnerships that present themselves in the future. The City should leverage any future opportunities for additional partners to support implementation of the ATP.

**Table 5 - Proposed Partners and Roles** 

	Anticipated Roles							
Potential Partners	Planning	Design	Policies	Construction	Maintenance	Enforcement	Education	Promotion

Timiskaming Health Unit			•				•	•
Provincial Stakeholders	•	•	•				•	•

### **5 FUNDING OPTIONS**

A review of internal and external funding options was conducted to identify different options available. The City is encouraged to monitor available funding opportunities within and external to the City, and to utilize the information contained within this plan to support funding applications. The following is a list of potential external funding sources that could be explored; however, they are subject to change and should be reviewed again prior to applications. It is important for the City to seek a diverse range of funding sources for the various initiatives and programs highlighted in this plan and external sources are an effective way to reduce the City's costs while being an opportunity to develop new partnerships.

**Table 6 - Potential Funding Opportunities** 

Funding opportunities	Additional details
Federal Active Transportation Fund	For additional details regarding the Active Transportation Fund refer to: https://www.infrastructure.gc.ca/trans/active-actif-eng.html
Canada Community- Building Fund / Provincial Gas Tax	For the federal Canada Community-Building Fund program please refer to: <a href="https://www.infrastructure.gc.ca/plan/gtf-fte-eng.html">https://www.infrastructure.gc.ca/plan/gtf-fte-eng.html</a> For the provincial program refer to: <a href="http://www.mto.gov.on.ca/english/service-commitment/gas-tax-program.shtml">http://www.mto.gov.on.ca/english/service-commitment/gas-tax-program.shtml</a>
Federation of Canadian Municipalities Green Municipal Fund	For additional details regarding the Green Municipal Fund and potential funding alternatives refer to: <a href="https://fcm.ca/home/programs/green-municipal-fund.htm">https://fcm.ca/home/programs/green-municipal-fund.htm</a>
Federal and Provincial Infrastructure / Stimulus Programs	For Federal Government infrastructure stimulus fund details refer to: <a href="https://www.canada.ca/en/office-infrastructure.html">https://www.canada.ca/en/office-infrastructure.html</a> For Provincial Government infrastructure stimulus fund details refer to: <a href="https://www.ontario.ca/page/ministry-infrastructure">https://www.ontario.ca/page/ministry-infrastructure</a>

Tourism Economic Development and Recovery Fund	For additional details regarding the Tourism Development fund refer to: https://www.ontario.ca/page/available-funding-opportunities-ontario-government#section-26
Service Club Support	Lions, Rotary and Optimist clubs who often assist with highly visible projects at the community level.

Funding opportunities	Additional details
Corporate Environmental Funds (e.g. Shell, TD, MEC, etc.)	For example refer to: <a href="https://www.shell.ca/en_ca/sustainability/communities/funding-guidelines-process.html">https://www.shell.ca/en_ca/sustainability/communities/funding-guidelines-process.html</a> for Shell Canada's Social Investment Program or <a href="https://www.td.com/corporate-responsibility/fef-grant.jsp">https://www.td.com/corporate-responsibility/fef-grant.jsp</a> for TD's Friends of the Environment Foundation Grant
Private Citizen Donation / Bequeaths	Can also include tax receipts for donors where appropriate.

### **6 SUPPORTING IMPLEMENTATION**

Beyond phasing and costing, there are several factors which can shape how active transportation gets rolled out from the planning stages through to implementation and operations.

#### 6.1 POLICY CONSIDERATIONS

Policies are the framework to create top-down change in a municipality. The following are a set of policy considerations which can help facilitate change towards supportive active transportation planning and design in Temiskaming Shores.

#### 6.1.1 PAVED SHOULDERS ON RURAL ROADS

The preferred active transportation network includes proposed signed routes on rural roads where there is existing demand for cycling, but the current road conditions (gravel surface) cannot accommodate the implementation of paved shoulders. Peters Road is the primary location where this situation occurs. Due to the current conditions, the road needs to be resurfaced to asphalt before it can be marked as a signed route. As a result, the phase for this route is long term. In other locations, most notably Radley Hill Road and Stephenson Road, paved shoulders are recommended for implementation with capital construction.

Application of signed bike routes on these routes is considered appropriate based on the current traffic volumes and speed thresholds outlined in the updated OTM Book 18. To improve safety for all road users and accommodate for additional traffic volumes in the future, however, it is recommended that when these roads are next scheduled in the City's Capital Budget for reconstruction / rehabilitation, the roadway platform should be widened, allowing the implementation of paved shoulders on both sides of the road (with a desired width of 1.5 metres) to support and provide a designated cycling facility. This would provide greater comfort and encourage more active transportation usage in rural areas. Paved shoulders can also benefit pedestrians in rural areas – as per the Highway Traffic Act, people are permitted to walk in a roadway shoulder facing the direction of oncoming traffic. The installation of paved shoulders has benefits to safety for all users, while also reducing maintenance costs and improving the lifespan of the roadways. In many cases, the long-term costs associated with implementing paved shoulders are offset by these asset management savings, making paved shoulders an investment that improves safety, demonstrates a commitment to active transportation and saves the community money in the long run.

From a municipal risk management perspective, implementing the green Bicycle Route Marker sign (on roads considered appropriate for such application) or the yellow Share the Road warning sign on roads where paved shoulders have not yet been implemented can also demonstrate the City's awareness that people are already biking on the road.

#### 6.1.2 SPEED LIMIT EVALUATION AND REDUCTIONS

Speed differentials between people driving and people using active transportation are a key factor in determining how comfortable an active transportation facility is perceived by users to be. On corridors where active transportation facilities are being proposed, the City should consider speed limit reductions (and reductions in the design speed of those corridors) to improve safety for all users along those routes.

While Lakeshore Road is the highest profile corridor that should be considered for a reduction in speed limit (recommended for 50-60km/h to prioritize active transportation and encourage people driving to use

Highway 11), other corridors where shared facilities are being recommended such as Niven Street, Dymond Avenue, Farah Avenue, Cedar Avenue and Latchford Street could also be considered for speed limit reductions to improve conditions for active transportation.

#### 6.1.3 NEW DEVELOPMENT AREAS

New development areas should be reviewed to identify opportunities to connect the future community to the active transportation network, particularly off-road trails within the City. This will require identifying conceptual trail linkages to the development community and ensuring their implementation at the time of development.

It is imperative that the City work with the development community to ensure that active transportation facilities and amenities are incorporated in new developments proactively and that the communities are designed in a manner than encourages safe and accessible active travel. The City should consider requiring sidewalks on one side of all new residential streets and should require sidewalks on both sides of new and reconstructed collector and arterial roads to improve the pedestrian environment within the City.

#### 6.1.4 ZONING BY-LAW

The City is recommended to strengthen language supporting active transportation in the current zoning by-law. This can be done when a new zoning by-law is developed, or as part of a municipally initiated zoning by-law amendment(s). An amendment should focus on enhancing active transportation amenities in private developments, such as increasing the number of bicycle parking spaces as part of residential, commercial, and institutional developments, as well as building forms that accommodate the awnings and other covered-walkway structures that protect pedestrians from the elements. Modifications to the zoning by-law, like the two examples noted above, have the ability to incorporate design elements into new developments over time and create a public realm that encourages and supports active travel.

#### 6.1.5 NEW MOBILITY IMPLICATIONS

The City's existing by-laws can be enhanced to clarify cycling operations and specifically define and provide direction on the use of electric bikes, electric scooters and power assisted bicycles. In 2020, MTO launched a five-year e-scooter pilot program allowing municipalities to pass by-laws to determine where e-scooters can operate. As part of this initiative, MTO has addressed legal definitions and operational concerns that should be reviewed prior to establishing or amending a by-law. The City could review existing by-laws and amend where appropriate to provide more clear provisions regarding permitted and prohibited uses for electric bikes, electric scooters and power assisted bicycles. Consideration could also be given to installing publicly accessible charging outlets for the charging of e-bikes and e-scooters within the City.

### 7 OPERATIONS AND MAINTENANCE

A key consideration when implementing the ATP is the operations and maintenance of active transportation routes and the asset management of infrastructure. Regular and appropriate maintenance of active transportation facilities can help protect the City's capital investments by maintaining the lifespan of infrastructure.

As the active transportation network expands and best practices emerge, consideration should be given to adapting maintenance practices and the level of service to address new facilities and standards such as the Province's Minimum Maintenance Standards (MMS) for Municipal Highways (O.Reg. 239/02). The MMS outlines various elements of road maintenance and operations including the frequency of road inspections, weather monitoring, ice formation on roadways, snow accumulation and sidewalk trip ledges. The MMS are non-mandatory guidelines but should be applied unless a municipality has established their own Council-approved level of service maintenance standards. If a municipality develops their own standards, it is still recommended to align with the current MMS.

Maintenance practices for active transportation facilities can include:

- Sweeping;
- Surface repairs;
- Pavement markings and signage;
- Vegetation management;
- Snow clearance / ice control; and
- Drainage improvements and drainage grates.

Clear guidance on asset management is provided in the City's Assessment Management Plan. The plan outlines level of services standards, asset management strategies and actions for trails, sidewalks and roads. It is recommended that as the City builds out their active transportation network, that the strategies outlined in the Asset Management Plan and related studies such as the Roads Condition Study and Sidewalk Condition Study, be applied.

Table 7 outlines asset management assumptions and typical service life for various elements of an active transportation network. This information is based on best practices outlined in OTM Book 18; however, it is recommended that City review this information and consider the various strategies to manage their active transportation network.

Table 7 - Asset Management Strategies Source - OTM Book 18 Update

Туре	Useful Life	Asset Management Strategies
Asphalt bikeway	25 years	<ul><li>Minor repairs</li><li>Resurfacing</li><li>Rehabilitation</li><li>Full-depth replacement</li></ul>
Concrete bikeway	50 years	<ul> <li>Minor repairs</li> <li>Replace deteriorating segments</li> <li>Full replacement</li> </ul>
Bridge (active transportation or motor vehicle)	25–75 years	<ul><li>Bridge repairs</li><li>Minor rehabilitation</li><li>Full replacement</li></ul>
Culvert	25–50 years	<ul><li>Culvert repair</li><li>Minor rehabilitation</li><li>Full replacement</li></ul>
Painted Line Markings and Symbols	1–2 years	<ul> <li>Refresh annually or depending on wear</li> </ul>
Durable Line Markings, Symbols and Green Surface Treatments	3–7 years	<ul> <li>Depends on type, weather conditions, amount of wear, preparation of surface during application</li> </ul>
Signage	20 years	<ul> <li>Replace damaged or faded signs</li> </ul>
Physical separation (bollards, curbs, planters, etc.)	Until damaged	<ul> <li>Repair or replace damaged or missing bollards and other separators</li> </ul>

#### 7.1 WINTER MAINTENANCE

Currently, the City of Temiskaming Shores provides snow clearing on its sidewalks but does not provide any maintenance on its cycling facilities. Segments of the STATO Trail, particularly those along Lakeshore Road, are removed during the winter to provide for easier winter maintenance of the adjacent roadway surface.

As the City moves forward with additional investments in active transportation, it is recommended that winter maintenance policies be adopted to ensure that priority cycling facilities remain open and accessible all year round. A growing number of communities in Ontario have identified priority winter cycling networks which receive enhanced snow clearing to ensure that those routes are clear and passable, mostly aiming to achieve a comparable level of service to that which is provided on arterial roadways for automobiles. A Priority Winter Cycling Network provides a more predictable, safer route for people on bikes, providing them with the sense of confidence that their route will be clear and passable. By clearly identifying the priority routes – which should be comprised of a connected grid of high-comfort facilities that connect to the City's key destinations – The City helps to set clear expectations among people on bikes. The Priority Winter Cycling Network should start off small, potentially as a 2-year pilot project, to see what types of additional staffing resources and additional snow clearing equipment may be required. The pilot will also give the community the opportunity to experience winter maintained cycling routes and, when coupled with some of the programming recommendations contained in Chapter 4, may help to grow the City's winter cycling culture. As the pilot continues, the City can evaluate ridership and monitor the growth of winter cycling, helping to determine whether the Priority Winter Cycling Network should be expanded, maintained or discontinued in the future.

### 8 MONITORING AND REPORTING

A monitoring plan is an important component post-implementation to evaluate the success of a route, and to inform smarter investments through data-driven measures. Research indicates that meaningful performance measures can help to prioritize future projects and appropriately allocate resources. The following approaches are recommended to be explored by City Staff in further detail, for inclusion into the on-going workplans of monitoring for maintenance and operations staff.

#### 8.1 MONITORING OF ACTIVE TRANSPORTATION ASSETS

As part of the successful implementation of this plan, it is recommended that supplementary monitoring efforts be undertaken by City staff to gain a better understanding of the active transportation network and how it's being used. Similar to how City staff monitor the road network for deficiencies such as potholes and broken streetlights in need of repair, bike lanes and trails also require monitoring to ensure issues are promptly addressed. Doing so ensures that active transportation facilities remain in a state of good repair and can continue to accommodate the needs of people using it.

Beyond the scope of this ATP, but raised by multiple stakeholders and members of the public during consultation, is the need for the City to develop a comprehensive inventory of the City's existing sidewalks. The poor condition of the City's sidewalks were identified as one of the key deficiencies in the City's existing efforts to promote and support active transportation, and should be remedied as new infrastructure investments are contemplated. Consider developing a sidewalk assessment to identify priority areas for improvement. An example sidewalk assessment from a comparable municipality to Temiskaming Shores can be found here: Microsoft Word - SCA Report - Innisfail.docx (civicweb.net)

#### 8.2 UNDERTAKE SURVEY OF RESIDENTS

Another approach to monitoring the overall active transportation network is to conduct a survey of Temiskaming Shroes residents on a regular basis. Such surveys could be carried out on an annual or biannual basis and ask residents about what they like and dislike about the network. The results can then be used to inform short-term actionable items that respond to the immediate needs and requests of residents, contingent on the scale and scope of the project. Surveying of residents ensures regular dialogue between City Staff and the users of the network themselves.

#### 8.3 PROVISION OF PERMANENT DATA COLLECTION TOOL

Permanent automated data collection tools can allow City Staff to effectively monitor the active transportation network in real time and collect a significant amount of data with which to inform decision making. For the purpose of this plan, the two forms of permanent data collection include automated trail counters and intersection cameras that monitor the movement of all modes of transportation.

Automated trail counters are pieces of monitoring infrastructure that count the number of pedestrians and cyclists on an off-road trail. City staff would be able to retrieve data from the automatic trail counter to review pedestrian and cyclist data over the long-term and assess a facility's use. Alternatively, LTE and Wi-Fi enabled traffic cameras at select intersections within the City can monitor the number of pedestrians and cyclists using on-road infrastructure in real time. Both pieces of monitoring equipment will allow for better informed decision making through real-time data.

#### 8.4 REPORT ON IMPLEMENTATION AND PROGRESS

Given the short timelines for implementation of a significant portion of the City's ATP, it is recommended that Temiskaming Shores issue annual reports detailing their progress towards achieving the goals and objectives of this Plan for the first five years of its implementation. These annual reports can highlight the new infrastructure investments that have been brought online, the ways that new programs and partnerships are reaching more residents in the community and the overall trends in transportation behaviour as the City's network of active transportation infrastructure becomes more robust. These reports would also be a good place to highlight the results of pilot projects such as the winter maintenance pilot and the pilot project protected bike lanes across the Wabi River Bridge, as well as highlighting any improvements that the City is making to its network of sidewalks.

This report can provide a powerful accountability tool for the City – it helps to build trust and awareness about how the ATP is being implemented, and what the results of the associated investments are. The report will provide an annual snapshot of the state of active transportation in Temiskaming Shores, helping to create community excitement as the culture of active transportation grows, and serving as a marketing tool to highlight how the City is playing a leadership role in becoming an active transportation leader in Northern Ontario.

# 9 NEXT STEPS AND RECOMMENDATIONS

The Active Transportation Plan provides the City of Temiskaming Shores with a roadmap to become one of Ontario's leading municipalities with regards to active transportation. It provides the City with a short-term, achievable path towards a complete network of walking and cycling facilities in its urban areas, all while building upon the strong partnerships that already exist to support the culture of active transportation in the City. This plan builds upon the existing momentum within the City – the investments in the STATO trail, the partnerships that deliver new programs every year and the community members who are increasingly taking to walking, cycling, and wheeling around their City. It charts a path for the City to reimagine its relationship with its public spaces, turning streets into places where increased levels of active transportation contribute to the City's vibrancy and vitality as it emerges from the COVID-19 pandemic. To help move this plan from a vision to reality, a series of recommendations have been developed to guide City leadership in moving forward with implementing this plan, in partnership with internal and external stakeholders. These recommendations include implementing the various policies, programs, and procedures that support both the implementation of physical infrastructure and the development of social infrastructure to support active transportation in Temiskaming Shores.

At its core, this Plan is a guide for the City to realize many of its broader policy goals through increased support for active transportation. Whether being done in support of economic development, quality of life, attracting tourism dollars, building a more equitable community, or ensuring that the City is a leader in environmental stewardship, investments in active transportation pay off along multiple axes that are priorities for the City's future. The fact that this Plan has been developed to align with those goals and has been guided by strong partnerships with the City's existing stakeholders helps to ensure that this Plan will be one where collaborative support will move it from vision to reality in the near future.

Moving forward, the City is encouraged to work in close partnership with key stakeholders to both implement new programs, policies, and infrastructure, as well as to promote all that Temiskaming Shores has to offer, well beyond its borders. The following table provides a summary of 21 core recommendations that City staff are encouraged to pursue as part of the broader implementation of this plan.

#### Recommendations

- 1. Incorporate the proposed active transportation network illustrated in Maps 3a, 3b, 3c, 4a and 4b as a Schedule in the City's Official Plan when next updated.
- 2. Reference should be made to OTM Book 18: Cycling Facilities (2021) to inform and guide the design and implementation of cycling and in-boulevard facilities.
- 3. Reference should be made to OTM Book 15: Pedestrian Crossings to inform and guide the design and implementation of pedestrian crossing treatments.
- 4. The City should continue to identify opportunities to implement active transportation routes / facilities in conjunction with capital infrastructure projects to achieve economies of scale and cost savings.

#### Recommendations

- 5. As part of the annual capital budget review process, City staff should use the ATP to inform prioritization and implementation of active transportation infrastructure.
- 6. As part of scheduled roadway projects and Capital budget forecasting, the City should allocate funding to construct the Short-Term Active Transportation Network (See Maps 5b and 5c) by the end of the 2027 construction season.
- 7. When capital reconstruction projects are scheduled for the downtown areas of Haileybury and New Liskeard, priority should be given to expanding spaces for walking, cycling and amenities by narrowing vehicle lanes and parking facilities.
- 8. The City should implement a 2-way protected cycle track over the Wabi River Bridge as a pilot project to close a key gap in the existing STATO Trail
- 9. The City should continue to explore external funding sources and partnerships to help fund implementation of the ATP.
- 10. The City should adopt the Trails design and amenities standards presented in this plan to improve access to the trails at Devil's Rock and Pete's Dam Parks
- 11. Speed limit reductions and traffic calming design measures should be implemented on roads proposed for signed bike route in the urban / built-up areas of Temiskaming Shores as well as some of the roads adjacent to the STATO Trail, especially Lakeshore Road.
- 12. The City should expand the mandate of the existing BFC Committee to serve as an Active Transportation Advisory Committee, considering elements of the pedestrian experience as well as the cycling experience in Temiskaming Shores
- 13. The City should undertake a sidewalk conditions analysis and should establish a consistent annual capital budget for the replacement and repair of existing sidewalks as well as the installation of new sidewalks in priority locations (see maps 4a and 4b)
- 14. The City should establish an Active Transportation Coordinator to deliver and champion the recommended outreach initiatives identified in Chapter 4.
- 15. The City should allocate the necessary funding to deliver the programs listed in Chapter 4 on an ongoing basis to help build a stronger culture of active transportation in Temiskaming Shores.
- 16. As part of scheduled roadway projects in the City's Capital Budget, consideration should be given to widening the roadway platform (where possible / feasible) and implementing paved shoulders on both sides of the road to support and provide a designated cycling facility.
- 17. The City should review and revise its policy regime to require sidewalks and cycling facilities in all new residential developments and to require bike parking and other end of trip facilities within the City's Zoning bylaw.
- 18. The City should undertake a Winter Maintenance Pilot Project to evaluate the costs and efficacy of providing winter maintenance to select cycling routes, particularly those that connect to popular destinations within the community.
- 19. As part of the annual review process, ensure an adequate operational / maintenance budget is provided to account for new active transportation facilities, including their maintenance and lifecycle replacement costs. The City should also review and update maintenance and

#### Recommendations

- operations practices / level of service standards to consider the expansion of the active transportation network.
- 20. Acquire automated counting technology to provide City staff with real time data along active transportation corridors on pedestrian and cyclists volumes.
- 21. Collect data and report regularly on the implementation of the ATP, changes in transportation habits and other impacts on the community of these new investments.

Appendix A:

Detailed Costing Breakdown

City of Temiskaming Shores
Draft November 2021

#### Table 1 - Active Transportation Unit Costs

This table provides an overview of the estimated unit costs for active transportation and cycling facilities, structures and crossings and other elements of an active transportation / cycling network. All unit prices exclude tax, contingency, design and approvals costs.

ITEM	DESCRIPTION	UNIT	UNIT PRICE RANGE	PRICE USED	COMMENTS/ASSUMPTIONS
			1.0 GENE	RAL ACTIVE TRAN	SPORTATION FACILITIES
				Shared Lanes / Pay	ved Shoulders
1.1	Signed Bike Route in Urban or Rural Area	linear KM	\$1,000 to \$1,200	\$1,200	Price for both sides of the road, assumes one sign a minimum of every 500 metres in the direction of travel. Price assumes that signs will be mounted on an existing post. Price includes:  - \$300 per sign x 4 signs (2 signs on each side of the road)
1.3	Signed Bike Route with Sharrow Lane Markings Intended to supplement a signed bike route in specific locations. Not intended to be a stand-alone facility type.	linear KM	\$11,600	\$11,600	Price for both sides of the road, includes route signs every 500 metres and sharrow stencils every 75 metres as per OTM Book 18 guidelines. Price includes:  - \$300 per sign x 4 signs (2 signs on each side of the road)  - \$400 per stencil marking x 26 (13 stencils on each side of the road)
1.4	Signed Route with Edgeline	linear KM	\$12,200	\$12,200	Price for both sides of the road, includes signs and painted edgeline (100mm solid white line). Price includes:  - \$300 per sign x 4 signs (2 signs on each side of the road)  - \$5.5 per metre for painted solid white line
1.5	Signed Bike Route with Paved Shoulder in conjunction with existing road reconstruction / resurfacing	linear KM	\$115,000 to \$215,000	\$215,000	1.5 metre paved shoulder on both sides of the road. Assumes cycling project pays for additional granular base, asphalt and painted line. Price may vary from \$115,000 to \$215,000 depending on work needed to improve platform. Price includes:  - \$300 per sign x 4 signs (2 signs on each side of the road)  - \$5.5 per metre for painted solid white line (both sides of the road)  Price may be higher if road platform needs to be widened.
1.6	Signed Bike Route with Buffered Paved Shoulder in conjunction with existing road reconstruction / resurfacing project	linear KM	\$275,000 to \$340,000	\$300,000	1.5 metre paved shoulder + 0.5-1.0 metre paved buffer on both sides of the road. Assumes cycling project pays for additional granular base, asphalt, painted edge lines and signs (buffer zone framed by white edgelines). Price may vary from \$275,000 to \$340,000. Price includes:  - \$300 per sign x 4 signs (2 signs on each side of the road)  - \$5.5 per metre for painted solid white line (both sides of the road)
1.7	Addition of Rumble Strip to Existing Buffered Paved Shoulder (rural)	linear KM	\$12,000		Price for both sides. Buffer \$6 / m.
1.8	Granular Shoulder Sealing	linear KM	\$18,000		Both sides spray emulsion applied to harden the granular shoulder. This will reduce gravel on the paved portion of the shoulder and significantly reduce shoulder maintenance. Use \$9 / m.
1.9	Upgrade Granular Surface Back Road to Chip Seal Surface	linear KM	\$56,000		Price includes pulverizing existing surface with double treatment (\$6 / m²) or tar and chip (\$2 /m²) at 7m wide.
			Cor	ventional and Sep	
1.10	Conventional 1.5m-1.8m Bicycle Lanes by Adding Bike Lane Markings and Signs	linear KM	\$29,000	\$29,000	Price for both sides of the road, includes signs, stencils and edge line. The price assumes:  -\$11,000 for painted lane line (\$5.5 per metre multiply 2 for both sides of the road)  -\$10,400 for painted bike symbols (assumes \$250 per symbol, 13 symbols per linear km multiply by 2 for both side of the road)  -\$2,500 for bike lane signs (assumes \$350 per sign and tab, 5 signs per linear km - spaced every 200 metres - multiply by 2 for both sides of the road)  -\$3,900 for 'No Parking' signs (assumes \$150 per sign, 13 signs per linear km multiply by 2). Signs to be mounted on existing and new posts. Price depends on number of stencils and signs used.

ITEM	DESCRIPTION	UNIT	UNIT PRICE RANGE	PRICE USED	COMMENTS/ASSUMPTIONS
	BESSILII FISH				d Bike Lanes - CONT'D
1.11	Conventional 1.5m-1.8m Bicycle Lanes through Lane Conversion from 4 lanes to 3 lanes	linear KM	\$53,000	ionar and Separated	Price for both sides. Includes grinding of existing pavement, markings, signs, painted markings. Assumes road is not be surfacing. The price assumes:  - \$11,000 for painted lane line (\$5.5 per metre multiply 2 for both sides of the road)  - \$10,400 for painted bike symbols (assumes \$400 per symbol, 13 symbols per linear km multiply by 2 for both side of the road)  - \$2,500 for bike lane signs (assumes \$350 per sign and tab, 5 signs per linear km - spaced every 200 metres - multiply by 2 for both sides of the road)  - \$3,900 for 'No Parking' signs (assumes \$150 per sign, 13 signs per linear km multiply by 2). Signs to be mounted on existing and new posts. Price depends on number of stencils and signs used.  - \$6 to \$8 per linear metre for lane line removal (soda blasting). Price varies on markings to be removed on a multi-lane roadway. Remoye soda-blasting cost component if the road is being resurfaced. The cost for resurfacing to be part of resurfacing project. Price for 1.5m bike lanes on both sides of the roadway (1.5m x 2 sides = 3.0m). The price assumes:
1.12	Conventional 1.5m-1.8m Bicycle Lanes in Conjunction with a New Road, or Road Reconstruction / Widening Project	linear KM	\$390,000		- \$14,000 for catch basins and leads (\$350 per lead x 40 catch basins per linear km) - \$360,000 for asphalt and sub-base (\$55/m2 = 120 x 1.5m BL x 1000 x 2) - \$16,000 for signs, stencils and edge line
1.13	Conventional 1.5m-1.8m Bicycle Lanes that require a road widening /reconstruction	linear KM	\$700,000		The roadway project funds all other improvements.  Price for both sides of the road, includes the cost for excavation, adjust catch basins, lead extensions, new curbs/driveway ramps, asphalt and sub-base, painted markings and signs. All costs associated with widening or reconstructing the road for the purposes of adding bike facilities is born by the bike project i.e. no economies of scale of adding a bike facility in conjunction with a planned
1.14	Buffered Bicycle Lane with Hatched Pavement Markings - No Road Construction / Widening or Road Diet required	linear KM	\$49,000		Price for 1.5m bike lanes with 1m hatched buffer. The price assumes: -\$30,000 for painted lines (\$6 x 5000 metres of line paint) -\$1,000 for hatching paint (1000 metres) -\$10,400 for painted bike symbols (assumes \$400 per symbol, 13 symbols per linear km multiply by 2 for both side of the road) -\$2,500 for bike lane signs (assumes \$350 per sign and tab, 5 signs per linear km - spaced every 200 metres - multiply by 2 for both sides of the road) -\$3,900 for 'No Parking' signs (assumes \$150 per sign, 13 signs per linear km multiply by 2). Signs to be mounted on existing and new posts. Price depends on number of stencils and signs used
1.15	Buffered Bicycle Lane with Hatched Pavement Markings - No Road Construction / Widening or Road Diet required Includes pre-cast curbs and flexible bollards in the buffer	linear km	\$165,000		Price for 1.5m bike lanes with 1m hatched buffer (includes pre-cast curbs and flexible bollards in the buffer). The price assumes: -\$30,000 for painted lines (\$6 x 5000 metres of line paint) -\$1,000 for hatching paint (1000 metres) -\$10,400 for painted bike symbols (assumes \$400 per symbol, 13 symbols per linear km multiply by 2 for both side of the road) -\$2,500 for bike lane signs (assumes \$350 per sign and tab, 5 signs per linear km - spaced every 200 metres - multiply by 2 for both sides of the road) -\$3,900 for 'No Parking' signs (assumes \$150 per sign, 13 signs per linear km multiply by 2). Signs to be mounted on existing and new posts. Price depends on number of stencils and signs used -\$95,000 for pre-cast concrete curbs on both sides - Assume 70% of roadway to include physical delineation (700 metres per 1 linear km): -700 metres / 1.83m curb length = 382.5 pre-cast concrete curbs -382.5 x \$250 = \$95,000 - Assume \$125 each 1.83m long curb x 2 = \$250 per linear metre of roadway (both sides) -\$21,000 for flexible bollards - Assume 700m spacing as per pre-cast curb placement above x 2 (both sides of the road)700m x 2 (both sides of the road) = \$1,400 -\$1,400 x \$150 (price per bollard) = \$21,000

ITEM	DESCRIPTION	UNIT	UNIT PRICE RANGE	PRICE USED	COMMENTS/ASSUMPTIONS
			Convent	onal and Senarate	l Bike Lanes - CONT'D
1.16	Buffered Bicycle Lane with Hatched Pavement Markings with Road Diet	linear KM	\$65,000	\$65,000	Price for 1.5m bike lanes with 1m hatched buffer. The price assumes:  \$30,000 for painted lines (\$6 x 5000 metres of line paint)  \$1,000 for hatching paint (\$1000 metres)  \$10,400 for painted bike symbols (assumes \$400 per symbol, 13 symbols per linear km multiply by 2 for both side of the road)  \$2,500 for bike lane signs (assumes \$350 per sign and tab, 5 signs per linear km - spaced every 200 metres - multiply by 2 for both sides of the road)  \$3,900 for 'No Parking' signs (assumes \$150 per sign, 13 signs per linear km multiply by 2). Signs to be mounted on existing and new posts. Price depends on number of stencils and signs used.  \$6 to \$8 per linear metre for lane line removal (soda blasting). Price varies on markings to be removed on a multi-lane roadway.
1.17	Buffered Bicycle Lane with Hatched Pavement Markings - Assumes a Road Diet from a 4 Lane Cross-Section to a 2 Lane Cross-section with a two-way centre turn lane.  Includes pre-cast curbs and flexible bollards in the buffer	linear km	\$194,620	\$194,620	Price for 1.5m bike lanes with 1m hatched buffer (includes pre-cast curbs and flexible bollards in the buffer). The price assumes: \$48,000 for painted lines (\$6 x 8000 metres of line paint) \$1,000 for hatching paint (1000 metres) \$10,400 for painted bike symbols (assumes \$400 per symbol, 13 symbols per linear km multiply by 2 for both side of the road) \$2,500 for bike lane signs (assumes \$350 per sign and tab, 5 signs per linear km - spaced every 200 metres - multiply by 2 for both sides of the road) \$3,900 for 'No Parking' signs (assumes \$150 per sign, 13 signs per linear km multiply by 2). Signs to be mounted on existing and new posts. Price depends on number of stencils and signs used \$95,000 for pre-cast concrete curbs on both sides - Assume 70% of roadway to include physical delineation (700 metres per 1 linear km): 700 metres / 1.83m curb length = 382.5 pre-cast concrete curbs - 382.5 x \$250 = \$95,000 - Assume \$125 each 1.83m long curb x 2 = \$250 per linear metre of roadway (both sides) - \$21,000 for flexible bollards - Assume 700m spacing as per pre-cast curb placement above x 2 (both sides of the road) 700m x 2 (both sides of the road) = \$1,400 - \$1,400 x \$150 (price per bollard) = \$21,000 - \$6 to \$8 per linear metre for lane line removal (soda blasting). Price varies on markings to be removed on a multi-lane roadway. Assume 1,660 metres of lane line removal for a 4 lane road: - 1000m of yellow line (centre line) per km (assume continuous line, no break at intersections) - 1 continuous dashed white line that separates 2 vehicles lanes (x2 for both sides of the road) - dashed white line: 3-3 skip pavement marking (3m long with 3m spacing) = 330m length x 2 for both sides of road = 660m
1.18	Buffered Bicycle Lane with Hatched Pavement Markings - Assumes New Road or Road Reconstruction/Widening already Planned	linear KM	\$393,000		Price for 1.5m bike lanes + 0.5m hatched buffers on both sides of the roadway (1.5m x 2 sides = 3.0m). The price assumes: - \$14,000 for catch basins and leads (\$350 per lead x 40 catch basins per linear km) - \$360,000 for asphalt and sub-base (\$55/m2 = 120 x 1.5m BL x 1000 x 2) - \$19,000 for signs, stencils and edge line  The roadway project funds all other improvements.
1.19	Buffered Bicycle Lane with Hatched Pavement Markings - Retrofit / No new road reconstruction or widening is planned	linear KM	\$533,000		Price for 1.5m bike lanes + 0.5m hatched buffers on both sides of the roadway (1.5m x 2 sides = 3.0m). The price assumes: -\$14,000 for catch basins and leads (\$350 per lead x 40 catch basins per linear km) -\$360,000 for asphalt and sub-base (\$55/m2 = 120 x 1.5m BL x 1000 x 2) -\$19,000 for signs, stencils and edge line -\$140,000 for removal and replacement of curb (140 / linear metre)  The roadway project funds all other improvements.
1.20	Buffered Bicycle Lane with Flex Bollards - Assumes Road Reconstruction/Widening Already Planned	linear KM	\$423,000		Price for 1.5m bike lanes + 0.5m hatched buffers + flexible bollards on both sides of the roadway (1.5m x 2 sides = 3.0m). The price assumes: - \$14,000 for catch basins and leads (\$350 per lead x 40 catch basins per linear km) - \$360,000 for asphalt and sub-base (\$55/m2 = 120 x 1.5m BL x 1000 x 2) - \$19,000 for signs, stencils and edge line - \$30,000 for flexible bollards (\$150 per bollard, spaced every 10m)  The roadway project funds all other improvements.

ITEM	DESCRIPTION	UNIT	UNIT PRICE RANGE	PRICE USED	COMMENTS/ASSUMPTIONS
			Conventi	onal and Separate	d Bike Lanes - CONT'D
	Buffered Bicycle Lane with Pre-Cast Barrier - Assumes New road or Road Reconstruction/Widening Already Planned	linear KM	\$483,000		Price for 1.5m bike lanes + 0.5m hatched buffers + flexible bollards+ pre-cast and anchored curb delineators. The price assumes: - \$14,000 for catch basins and leads (\$350 per lead x 40 catch basins per linear km) - \$360,000 for asphalt and sub-base (\$55/m2 = 120 x 1.5m BL x 1000 x 2) - \$19,000 for signs, stencils and edge line - \$30,000 for flexible bollards (\$150 per bollard, spaced every 10m) - \$50,000 - \$60,000 pre-cast curb delineators (\$250 / pre-case unit 2m length + \$7.5 / pins and anchoring. Assumes 2m long x 2 = 200-250 per km depending on intersections and driveways)  The roadway project funds all other improvements.
1.22	Supply and install surface mounted flexible post delineators	each	\$100 to \$150		Price depends on product, volume and supplier.
1.23	Standard precast concrete curb 178 mm high, 216 mm wide and 1.83 metre long	each	\$250		Approximately \$95,000 - \$100,000 per 1 linear kilometre. Assumes 70% of roadway to include physical delineation (700 metres per 1 linear kilometre):  - 700 metres / 1.83 metres = 382.5 pre-cast concrete curbs - 382.5 x \$250 = \$95,000  Assume \$125 each 1.83m long curb x 2 = \$250 per linear metre of roadway (both sides).
1.24	Standard precast concrete curb 457 mm high, 457 mm wide and 3.05 metre long	each	\$1,380		Approximately \$315,000 - \$320,000 per 1 linear kilometre. Assumes 70% of roadway to include physical delineation (700 metres per 1 linear kilometre):  - 700 metres / 3.05 metres = 229.5 pre-cast concrete curbs  - 229.5 x \$1.380 = \$317.000
1.25	Standard precast concrete bullnose 457 mm high, 457 mm wide and 1.22 metre long	each	\$970		Approximately \$550,000 - \$560,000 per 1 linear kilometre. Assumes 70% of roadway to include physical delineation (700 metres per 1 linear kilometre):  - 700 metres / 1.22 metres = 573.8 pre-cast concrete curbs  - 573.8 x \$970 = \$556,557
				Cycle Tra	icks
	Uni-directional Cycle Tracks: Raised and Curb Separated - In conjunction with existing road reconstruction / resurfacing project	linear KM	\$250,000 - \$500,000		Both sides. Assumes cycle track will be implemented as part of road construction. Could include minor utility / lighting pole relocations. Other components such as bike signals, bike boxes etc. are project specific and will impact unit price.
1.27	Uni-directional Cycle Tracks: Raised and Curb Separated - Retrofit Existing Roadway	linear KM	\$500,000 - \$1,200,000		Both sides. Includes construction but excludes design and signal modifications. Form of cycle track and materials as well as related components such as bike signals, upgrade/modification of signal controllers, utility/lighting pole relocations, bike boxes etc. are project specific and will impact unit price
1.28	Two Way Cycle Track - Retrofit Existing Roadway	linear KM	\$500,000 - \$800,000		One side. Includes construction but excludes design and signal modifications. Form of cycle track and materials as well as related components such as bike signals, upgrade/modification of signal controllers, utility/lighting pole relocations, bike boxes etc. are project specific and will impact unit price

ITEM	DESCRIPTION	UNIT	UNIT PRICE RANGE	PRICE USED	COMMENTS/ASSUMPTIONS
			Active T	ransportation Path	s and Multi-Use Trails
1.29	Two Way Active Transportation Multi-use path within road right-of-way	linear KM	\$275,000 - \$375,000	\$375,000	3.0m wide hard surface pathway (asphalt) within road right of way (no utility relocations). Price depends of scale / complexity of project and if existing sidewalk is being removed (i.e. crushing of existing sidewalk and compacting for trail base).
1.30	Concrete Splash Strip placed within road right-of- way between Active Transportation Multi-Use Path and Roadway	m²	\$150		Colour Stamped Concrete
1.31	Hard Surfaced Off-Road Multi-Use Trail Outside of Road Right-of-Way in an Urban Setting (New)	linear KM	\$300,000 - \$400,000	\$375,000	3.0m wide hard surface pathway (asphalt) within park setting (normal conditions) 90mm asphalt depth. Price depends of scale / complexity of project.
1.32	Hard Surfaced Off-Road Multi-Use Trail Outside of Road Right-of-Way in Urban Setting (Upgrade existing granular surface)	linear KM	\$150,000 - \$225,000		Includes some new base work (25% approx.), half of the material excavated is removed from site. Price depends of scale / complexity of project.
1.33	Granular Surfaced Off-Road Multi-Use Trail Outside of Road Right-of-Way in Urban Setting	linear KM	\$150,000 - \$165,000		3.0m wide, compacted stone dust surface normal site conditions. Price depends of scale / complexity of project.
1.34	Granular Surfaced Off-Road Multi-Use Trail Outside of Road Right-of-Way in Rural Setting	linear KM	\$200,000		3.0m wide, compacted stone dust surface in complex site conditions (includes cost of clearing and grubbing). Price depends of scale / complexity of project.
1.35	Upgrade existing granular surface trail to meet 3.0m wide compacted granular trail standard	linear KM	\$75,000 - \$125,000		Includes some new base work (25% approx.) and an average of 20 regulatory signs per kilometre. Price depends of scale and existing trail conditions e.g. width, slope, location of trail, etc.
1.36	Off-Road Multi-Use Trail Outside of Road Right-of- Way on Abandoned Rail Bed	linear KM	\$80,000 - \$125,000		3.0m wide, compacted stone dust surface, includes signage along trail and gates at road crossings. Assumes ballast is still in place.    Price depends of scale / complexity of project.
1.37	Granular Surfaced Multi-use Trail in a Woodland Setting	linear KM	\$175,000		2.4m wide, compacted stone dust surface. Price depends of scale / complexity of project.
1.38	Major rough grading (for multi-use pathway)	m²	\$8.00		Varies depending on a number of factors including site access, disposal location etc.
	less "		****	2.0 PEDESTRIAN	
2.1	Sidewalk	linear KM	\$300,000	\$300,000 STRUCTURES A	Price for 1.5m concrete sidewalk. Include site prep., select utility relocation, minor drainage modifications / traffic control.
				O ROSTONES I	Cost for two prefabricated pedestrian bridge structures excluding cost for studies, design and construction administration. This will
3.1	Pedestrian Bridge	each	\$1,140,000 - \$1,560,000	\$1,560,000	require the construction of a pier within the river channel.  A 'pony truss' or 'H-section' bridge style can span up to 55m and are the most economical design choice. For larger spans, a full

Assumes partial reported or intersection ror orders signals i.e. reangliment or ducts and Flashing lights, motion sensing switch (C.N. estimate)  Flashing lights, motion sensing switch and automatic gate (C.N. estimate)  3.0m wide, unlit culvert style approx. 10 m long for single elevated railway track
3.2 3.3 3.4 3.5 3.6 3.7 3.8 3.9 3.10 3.11 3.12 3.13 3.14 3.15 3.16 3.17	Pedestrian Boardwalk (Light-Duty) Self weathering steer russ pedestrian regense russ pedestrian russ pedestria	linear m linear m each each each each each each each each	\$1500 - \$2500 \$10,000 \$2,500,000 - \$4,500,000 \$6,500 \$1500 - \$2000 \$20,000 \$150,000 - \$180,000 \$80,000 \$120,000 \$300,000	\$6,000 \$75,000 \$25,000 \$15,000 \$35,000 \$5,000	A 'pony truss' or 'H-section' bridge style can span up to 55m and are the most economical design choice. For larger spans, a full 'box truss' is required and can span up to 80m.  Structure on footings, 3.0m wide with railings. Price depends of scale / complexity of project.  Price for 4.0m width bridge includes abutments  Depends on location, length and complexity of crossing as well as architectural detail.  1.8m wide, galvanized steel (assumes 8ft between each landing).  Adjustment of existing curb cuts to accommodate 3.0m multi-use pathway  Average price for basic refuge with curbs, no pedestrian signals  Average price for stop sign and durable pavement markings per intersection  Close existing intersection to normalize as a standard 4 legged stop controlled itnersection  Average price for removing existing school crossing and repainting in a new location  Average price for a design study for local intersections  Average price for a design study for Provincial intersections (involving one or more Provincial roads)  Average price for the addition of bollards per intersection or crossing  Full signalization of intersection with potential to add cycling facility and improvements  **Everage price for mersecular pedestrian signar.** Assumes paratar reputitor or mice segmans r.e.** reanginment or ducts and Flashing lights, motion sensing switch (C.N. estimate)  Flashing lights, motion sensing switch and automatic gate (C.N. estimate)

ITEM	DESCRIPTION	UNIT	UNIT PRICE RANGE	PRICE USED	COMMENTS/ASSUMPTIONS
		4.0 BARRIEF	RS AND ACCESS CONTR	OL FOR MULTI-US	E TRAILS OUTSIDE OF THE ROAD RIGHT-OF-WAY
4.1	Lockable gate (2 per road crossing)	each	\$4,000		Heavy duty gates (e.g. equestrian supported step over gate). Price for one side of road - 2 required per road crossing. Typically
	0 ( )				only required in rural settings or city boundary areas
4.2	Metal offset gates	each	\$2,000		"P"-style park gate
4.3	Removable Bollard	each	\$500 - \$750		Basic style (e.g. 75mm diameter galvanized), with footing. Increase budget for decorative style bollards
4.4	Berming/boulders at road crossing	each	\$1,200		Price for one side of road (2 required per road crossing)
4.5	Granular parking lot at staging area (15 car capacity-gravel)	each	\$45,000		Basic granular surfaced parking area (i.e. 300mm granular B sub-base with 150mm granular A surface), with precast bumper curbs. Includes minor landscaping and site furnishings, such as garbage receptacles and bike racks.
4.6	Paige wire fencing	linear M	\$60		1.5m height with peeled wood posts
4.7	Chain link fencing	linear M	\$90 - \$110		Galvanized, 1.5m height
				5.0 SIGNA	AGE
5.1	Regulatory and caution Signage (off-road pathway) on new metal post	each	\$150 - \$250		300mm x 300mm metal signboard c/w metal "u" channel post
5.2	Signboards for interpretive sign	each	\$2,400		Does not include graphic design. Based on a 600mm x 900mm typical size and embedded polymer material, up to 40% less for aluminum or aluminum composite panel
5.3	Staging area kiosk	each	\$2,000 - \$10,000		Wide range provided. Price depends on design and materials selected. Does not include design and supply of signboards
5.4	Signboards for staging area kiosk sign	each	\$1,500 - \$2,000		Typical production cost, does not include graphic design (based on a 900mm x 1500mm typical size and embedded polymer material). Up to 40% less for aluminum or aluminum composite panel
5.5	Pathway directional sign	each	\$350 - \$500		Bollard / post (100mm x100mm marker), with graphics on all 4 sides
5.6	Pathway marker sign	each	\$250		Bollard / post (100mm x100mm marker), graphics on one side only
5.7	Pathway marker sign	linear KM	\$1,000		Price for both sides of the path, assumes one sign on average, per direction of travel every 0.5 km
5.8	Bike sign	each	\$200		Price for one side of road.
			6.0 B	ICYCLE PARKING I	NFRASTRUCTURE
6.1	Bicycle rack (Post and Ring style)	each	\$150 - \$250		Holds 2 bicycles , price varies depending on manufacturer (includes installation).
6.2	Bicycle rack (U style)	each	\$600		Holds 2 bicycles , price varies depending on manufacturer (includes installation).
6.3	Bicycle rack	each	\$1,800		Holds 6 bicycles, price varies depending on manufacturer (includes installation).
6.4	Bicycle Locker	each	\$3,000		Price varies depending on style and size. Does not include concrete mounting pad.
6.5	Bike Loop	each	\$2,500		Price for installation including labour and equipment. Price also includes materials e.g. two channel detector for traffic cabinet, bike loop (wire and sealant), cable to traffic cabinet, handhole and conduit.
6.6	Bicycle Corral (one parking space with bollards)	each	\$1,500 - \$2,900		Price may vary from \$1,500 (galvanized finish with the mad shield corrosion warranty) to \$2,900 (stainless finish with the mad shield corrosion warranty) for one parking space.
				7.0 LIGHTING AN	D UTILITIES
7.1	Pathway Lighting	per 25 m	\$5,000		Includes cabling, connection to power supply, transformers and fixtures.
7.2	Relocation of Light / Support Pole	each	\$4,000		Adjustment of pole offset (distance between pole and roadway).
7.3	Relocation of Signal Pole / Utility Box	each	\$8,000		Adjustment of pole offset (distance between pole and roadway).
				8.0 PAVEMENT	MARKINGS
8.1	Sharrow Symbol	each	\$400		Price for durable paint. Sharrow symbol with green pavement marking
8.2	Bike Symbol	each	\$400		Price depends on volume
8.2	Line Painting	linear M	\$6		Price for durable paint.
8.2	Removal of Line Painting	linear M	\$3		N/A
				9.0 OTH	
9.1	Bike Box	each	\$1,500		Price may vary depending on road cross-section (e.g. two lane roadway, four lane roadway, etc.). Price includes installing a bike box on the approach of an intersection using a bike stencil and durable e.g. green surface treatment (\$250 / each). Price also include estimate to move stop-bar back to provide space for bike box.
9.2	Clearing and Grubbing	m²	\$15		
9.3	Bench	each	\$1,000 - \$2,000		Price varies depending on style and size. Does not include footing/concrete mounting pad
9.4	Safety Railings / Rubrail	linear M	\$300		1.4m height basic post and rail style
9.5	Small diameter culvert	each (6 m)	\$1,200		Price range applies to 400mm to 600mm diameter PVC or CSP culverts for drainage below trail
9.6	Flexible Bollards	each	\$110		Should be placed at 10m intervals where required. Cost depends on product type used.

#### Notes:

- 1. Unit Prices are for functional design purposes only, include installation but exclude contingency, design and approvals costs (unless noted) and reflect 2021 dollars, based on projects in southern Ontario.
- 2. Estimates do not include the cost of property acquisitions, signal modifications, utility relocations, major roadside drainage works or costs associated with site-specific projects such as bridges, railway crossings, retaining walls, and stairways, unless otherwise noted.
- 3. Assumes typical environmental conditions and topography.
- 4. Applicable taxes and permit fees are additional.

#### Table 2 - Proposed Crossing Enhancements

This table provides an overview of the estimated costs and phasing for the proposed crossing enhancements.

ID	Existing Crossing	Proposed Enhancement	Intersection	PHASE	Total	Cost
C0	4 legged, stop controlled on North, East and South approach.	Add stop signs and pavement markings	Ferguson Avenue/Main Street	Short	\$	6,000
	4 legged, stop controlled on North, West and South approach.					
C1	Channelized right turn on the South	Closing channelized intersection and normalizing it as a standard 4 legged stop controlled intersection	Rorke Avenue/Main Street	Short	\$	75,000
	School crossing					
C2	4 legged, stop controlled on East and West School crossing just north of the intersection	Move school crossing for Ecole Saint Croix School to Rorke/Cecil	Cecil St/Rorke Avenue	Short	\$	25,000
C3	4 legged, stop controlled on East and West Steep coming down on Browning	Add stop signs and pavement markings	Browning Street/Ferguson Avenue	Short	\$	6,000
C4	3 legged, stop controlled on Hessle  No pedestrian facility to cross coming off of the STATO Trail	Monitor current configuration of the raised crosswalk at the school  Recommend for future detail design study in this intersection to improve safety and reduce conflicts	STATO Trail/Hessle Avenue	Long	\$	15,000
C5	4 legged, signalized intersection  Angle and configuration difficult for cyclists to cross	Add bollards	Armstrong Street/Elm Avenue	Short	\$	5,000
C6	3 legged, stop controlled on Farah	Monitor for future traffic control	Lakeshore Road North/Farah Avenue	Long	-	
C7	4 legged, stop controlled on East and West, channelized right turns	Recommend for active transportation consideration in future reconstruction of the road for improved safety for all users	Highway 11/Drive In Theatre Road	Long	\$	35,000
C8	3 legged, stop controlled on Grant  No pedestrian facilities	Add stop signs and pavement markings	Drive In Theatre/Grant Drive	Short	\$	6,000
C9	3 legged, stop controlledon Radley Hill Road Steep hill coming off of Radley Hill	Signalized, potential to add cycling facility with improvements	Radley Hill Road/STATO Trail	Long	\$	180,000

Table 3 - Proposed Active Transportation Routes

This table provides a breakdown of the proposed routes, including length, phase and costing.

#### **Table 4 - Summary of Proposed AT Network**

This table provides a summary of the proposed active transportation and crossing enhancements as part of the Temiskaming Shores network.

Facility Type	Short-Term		Long-Term		Total	
	Length (KM)	Estimated Cost	Length (KM)	Estimated Cost	Length (KM)	Estimated Cost
Off-Road Multi-Use Trail	0.1	\$23,595	5.5	\$2,505,503	5.6	\$2,529,098
In-Boulevard Multi-Use Path	0	0	1.6	\$739,214	1.6	\$739,214
Buffered Bike Lane	3.3	\$149,292	0.4	\$32,794	3.7	\$182,086
Buffered Bike Lane or Two-Way On-Road	1.4	\$110,038	0	0	1.4	\$110,038
Bike Lane	0.4	\$14,574	0	0	0.4	\$14,574
Buffered Paved Shoulders	3.9	\$227,912	2.7	\$995,516	6.6	\$1,223,428
Paved Shoulder	2	\$416,305	10.3	\$2,764,183	12.3	\$3,180,488
Sharrows Markings	1.1	\$15,813	0	0	1.1	\$15,813
Signed Route	3.1	\$4,711	4.8	\$7,222	7.9	\$11,933
Candidate Locations for Pilot Projects	0.2	\$45,016	0	0	0.2	\$45,016
Candidate Locations for Traffic Calming Measures	3.6	\$51,796	0	0	3.6	\$51,796
Pedestrian Bridge	0	0	0.1	\$1,950,000	0.1	\$1,950,000
Sidewalks	0	0	14.4	\$5,389,125	14.4	\$5,389,125
Crossing Enhancement	-	\$123,000		\$230,000	-	\$353,000
Total	19.1	\$1,182,052	39.8	\$14,613,557	58.9	\$1,432,814
